CONTENTS

WATER-BASED COATINGS	5
SOLVENT-BASED COATINGS	13
UV COATINGS	25

Sayerlack's innovative technology for quality kitchen furniture delivers exceptional aesthetic and performance results, enhancing the wood, its craftsmanship, and design. Many of the most prestigious kitchen furniture manufacturers rely on Sayerlack products to achieve their desired outcomes, improving the value of their creations.

The kitchen is a space where functionality and aesthetic appeal are essential. Due to daily heavy use, furniture elements can show signs of wear over time. Therefore, the quality of coating products becomes crucial. Sayerlack finishes provide surfaces with outstanding durability, surface hardness, and resistance to scratch and abrasion while maintaining high transparency and softness.

Sayerlack's range for the sector is extensive, including water-based, solvent-based, and UV-curing coatings that enhance the beauty of treated surfaces with various finishes: transparent, lacquered, glossy, matte or natural effect.

Sayerlack's coating cycles meet very strict surface performance requirements, even under challenging conditions like those in kitchens. Numerous internal tests confirm the impressive performance of these products, such as excellent stain resistance.

Sayerlack solutions also comply with UNI 11216 standards, which set minimum requirements to ensure performance guarantees for end customers. The standard covers scratch resistance, resistance to temperature variations, resistance to dry heat, resistance to wet heat, resistance to cold liquids, light resistance, tendency to retain dirt, adhesion by pull-off and cross-cut.

Environmental awareness is increasingly intersecting with future developments. Coating products impact the ecosystem due to the chemicals they contain. The volatile organic compounds (VOCs) released during drying harm human health and the environment. Thanks to advancements in new technologies, such as water-based coatings, high solid content coatings, and BIO coatings formulated with renewable raw materials, Sayerlack produces sustainable products for the coating of kitchen furniture.

This range of coating products reflects our expertise in the kitchen furniture sector, assisting manufacturers in choosing the most suitable system for their needs. Our coating solutions include water-based, solvent-based, and UV products, suitable for all types of substrates: wood, laminates, MDF, ABS, and melamine papers, both for flat and profiled surfaces.

Our comprehensive and high-performance product range meets all requirements and offers customized solutions. Additionally, our global support service provides the best assistance at every stage of the coating process.

WATER-BASED COATINGS

Sayerlack has developed water-based coating cycles with finish quality in appearance, softness, and chemical-physical resistance that match those achieved with solvent-based products, ensuring environmental respect by drastically reducing solvent emissions.

The range includes single- or two-component products, transparent or pigmented, glossy or matte, also available in BIO* versions.

*Formulated with at least 10% of raw materials derived from renewable sources.

AU0420/00 WATERBORNE BASECOAT TRANSPARENT THIXO - BIO

Water-based primer for interiors. single-component suitable for coating interior wooden products, with high transparency, good wood brightening and high coverage. Good fullness and excellent sandability, it is suitable for closed or semi-closed pore systems.

AF0618/00 2K WATERBORNE SELF-SEALER NATURAL EFFECT

Low gloss waterborne DUAL-CURE self-sealer suitable for interiors. This product is particularly suitable when a natural effect is desired, since it leaves natural wood's look, touch and shade unchanged. Resins of new generation with which this product is formulated, make it very resistant to light and also give excellent chemical resistance.

AU0474/13 2K WATERBORNE BASECOAT FOR MDF - PIGMENTED

Single or two-component primer applicable by spraying directly on MDF or masonite supports. Featuring a high pigment content and a high solid, it allows for excellent filling of the support, providing color uniformity. It can be applied as a single component with good covering properties and a good aesthetic result final or catalyzed at 2% with AH1550/00 to maintain high elasticity and superior coverage.

AT2003/XX 2K WATERBORNE ULTRA-MATT CONVERTER

Ultra-matt two-component water-based finish with high chemical-physical resistance. Created to obtain a soft-feel effect with high chemical-physical resistance with 2-3 gloss opacity. The AT2003/XX finish is suitable for adding XA2006/XX water-based pastes in a volumetric ratio. Its innovative formulation allows you to create very opaque surfaces, with an anti-fingerprint and anti-scratch effect; superficial scratches can be removed simply by wiping with a cloth moistened with water and rubbing lightly. AT2003/NN-BB is formulated with raw materials coming from BIO-renewable sources.

SOLVENT-BASED COATINGS

Sayerlack's range of solvent-based kitchen products includes polyurethane, acrylic, and polyester coatings, available in transparent or pigmented versions with varying gloss levels. Polyurethane and acrylic coatings are versatile two-component products that provide high surface hardness and chemical-physical resistance. Polyester products are characterized by fast drying, surface hardness and ease of application. Sayerlack solvent-based products deliver high aesthetic results for both open-pore and closed-pore finishes, optimal resistance and softness of the coating film.

PU2020/13 PIGMENTED POLYESTER BASECOAT

No-waxed white pigmented polyester primer with excellent coverage and expansion. It also stands out for its speed and sanding qualities.

TU75XX/00 2K CLEAR ACRYLIC-POLYURETHANE SELF-SEALER NON-YELLOWING

Transparent acrylic-polyurethane self-sealer. It can be used both as a primer (to be applied directly to wood) and as a finishing coat. The main use is in open pore varnishes on oak, ash and other essences, with cycles consisting mainly of just two applications of the same product. The TU75XX/00 series has been formulated with new innovative resins which, compared to traditional acrylic cycles, have greater light protection power and do not require the activation of UV absorbers.

TZ0303/XX 2K SOLVENTBORNE ULTRA-MATT TOPCOAT

Ultra-matt two-component transparent and pigmented finish, solvent-based, very matt, for interiors. Soft/velvety, with excellent chemical resistance (in particular to alcohol and acetone). On melamine papers and any other difficult-to-adhesion supports, it is possible to obtain a notable increase in this aspect by adding TH2580/00 at 5%.

UV COATINGS

The Sayerlack UV coatings range includes ready-to-use products for industrial use, available in water-based or solvent-based formulas. The main advantages of using UV-curing coatings include shorter production times, space savings, long or unlimited pot life, low or zero solvent emissions, and products ready for packaging immediately after the production cycle.

RU03280/13 UV WHITE POLYESTER PRIMER

High coverage white UV polyester primer. It is particularly suitable for floor and door applications. It also stands out for its excellent sanding.

RU7579/00

ACRYLIC UV BASECOAT - NON YELLOWING

UV acrylic primer formulated with special resins for drying with a mixed system (DUAL CURE), for painting flat parts of furniture and doors. The mixed catalysis system gives the product the versatility performance typical of polyurethane products, excellent pore cutting for open pore systems and good filling in closed pore systems. Easy to use and excellent sanding. Transparency is also excellent.

RZS2963/00

UV MATT ACRYLIC TOPCOAT

Spray acrylic matte finish. Developed with a UV system, it is a finish designed for spray coating doors or flat parts of furniture.

TECHNICAL DATA

Gloss available	RZS2963/00 UV MATT ACRYLIC TOPCOAT GLOSS 30
Pack size Lt *MTO made to order	25* Lt - 199* Lt
Solid content	26%
gr/m ² x layer	80-90

RLO3056/00

UV ACRYLIC TOPCOAT BY ENGRAVED ROLLER COATER

UV gloss clear finish for engraved roller. Its main characteristics are: high flow, good stability in the machine, absence of surface defects and good aesthetic characteristics. Another characterizing aspect of this product is the fullness of the film applied.

TECHNICAL DATA

Pack size Lt *MTO made to order	25* Lt
Solid content	99%
gr/m ² x layer	40-60

RZ91XX/00 UV MATT ACRYLIC TOPCOAT FOR OPEN PORE

Dryable matt finish with mixed polyurethane-UV system designed for spray painting doors or flat parts of furniture. This product therefore combines the drying speed and hardness typical of UV products with the ease of use, softness, uniformity of opacity and perfect pore design, characteristics of polyurethane products. RZ91XX/00 finds its ideal use on doors with an open pore finish.
