EASY APPLICATION

AFL3178/A0

ONE PACK WB SELF-SEALER FOR DIPPING APPLICATION AFL3178/A0

Sayerlack presents the alternative to conventional solvent based nitrocellulose products.

AFL3178/A0 is a one-pack waterborne self-sealer for dipping application providing good build and a smooth surface. It is designed as the alternative to conventional solvent based nitrocellulose products traditionally used for this application.

Based on non-yellowing acrylic resins, **AFL3178/A0** ensures excellent yellowing resistance in both transparent and tinted formulations. The product can be applied over a base stain or as a natural finish.

AFL3178/A0 is suitable for typical timbers such as pine and beech but not recommended for hardwoods with high tannin content as it is not an isolating basecoat.

AFL3178/A0 is especially developed for fast, simple production of vertical parts of chairs and tables. For a complete system recommendation, to provide the chemical and physical properties required for horizontal surfaces (table tops, seats etc.) use a 2k waterbased topcoat such as **ATV23**/XX**.

Can also be used as a sealer for fishing floats. 2 x dip application provides excellent base for solvent dip products reducing overall VOC.

CHARACTERISTIC	BENEFIT
1k WB dipping formulation	Fast simple production
	Replace traditional solvent product
Non-yellowing	Maintains appearance longer than traditional products
Versatile basecoat	Can be finished with both water and solvent products
Ideal dipping properties	Even run off producing very smooth surface maintaining good build
