GREATER PROTECTION FOR DOORS AND WINDOWS

Wooden doors and windows installed outdoors suffer the continuous aggression of atmospheric agents. This is why one of the most important requirements for coating systems is their duration.

The HYDROPLUS coatings selected for the ANTI-AGE SYSTEM are the result of research in the maximum protection of wood and coating film. They reduce the absorption of humidity and solar radiation, guaranteeing the maximum duration of products exposed outdoors.

SAYERLACK
INNOVATIVE WOOD SOLUTIONS

Sayerlack is a brand of The Sherwin-Williams Company

[HYDRO PLUS] with ANTI-AGE SYSTEM

ANTI-AGE SYSTEM guarantees 10 years for exterior doors and windows coated with Hydroplus systems. We have been protecting wood for 60 years. The exceptional performance of our warranty is the result of our considerable experience.

THE CERTIFICATIONS

We have called on leading research institutes to certify the quality of our products. The **CATAS QUALITY AWARD CSEW PLUS** and **CATAS WKI PREMIUM CSEW PLUS** certifications attest to the quality of the coating system, in terms of exposure time outdoors and wood protection. They also certify the methodical quality control of the production batches, by complying with the requirements and tests set out in the technical specifications required by CATAS and the German Wilhelm Klauditz Institut (WKI).

EXTREME EXPOSURE: CONQUERING MANY CHALLENGES

- To guarantee that a coating system for exteriors can protect wood in all possible climate conditions, we have pushed ourselves beyond the extreme limit. Our researchers coated thousands of panels and exposed them on all latitudes of the globe. We successfully passed numerous resistance and duration tests with exceptional results.
- In collaboration with **Q-Lab Weathering Research Service** in Florida (USA), we have tested coating systems in extreme climatic conditions in order to obtain a certification for extended exposure time outdoors.
- The exclusive **Atlas EverSummer** program let us expose samples in Miami, Florida, and Townsville, Australia. This allowed us an exposure to two summers in a period of only 12 months and drastically reduce the development time of our coating products.
- The **eXtreme** project is designed to test the life and performance of exterior coating systems by testing them in contact with every agent or cause of degradation, in any climate on the planet. The Sayerlack panels have been exposed outdoors for a year in three different continents: Medina (Ohio, USA), Moscow and Mexico City.
- In the **Baltic Project** panels coated with Hydroplus Sayerlack exterior products will be exposed in three fields in Estonia for five years. The panels will be subject to the combined action of the extremely low temperatures and the closeness, just a few metres, to the Baltic Sea.

Contact your sales representative to find out how to enter the exclusive ANTI-AGE SYSTEM warranty program for HYDROPLUS products.
