ANTIGRAFFITI

From the long tradition of excellence in research and development of outdoor products, Sayerlack has developed a series of **ANTIGRAFFITI** waterbased finishing systems..

These are highly specialized products that combine exterior durability with high resistance to solvents, gasoline, acids, alkaline products – properties needed to produce easy clean surfaces necessary to remove graffiti.

The systems are two-component PU technology and can be applied to a wide variety wood species. The hardener promotes the adhesion and the cross-linking necessary to achieve the performance properties.

To meet all the needs of the market the **ANTIGRAFFITI** products come in a range of systems. Please contact your local technical support to pick the system best suited to your requirements.

All ANTIGRAFFITI systems can be tinted with transparent iron oxide pastes **XA4034/XX** series and the opaque pigment pastes series, **XA2006/XX**.

TECHNICAL CHARACTERISTICS		
APPLICATION	Spray (conventional, airmix, airless and electrostatic)	
RAW OR PRETREATED SUBSTRATED	Wood for exterior	
DRYING	Room Temperature	8 h
	Ventilated oven forced at 35°C	3 h
STACKABLE	24 h after application	
THINNING	Not necessary; ready to use	
PIGMENTS	Pastes of the series XA4034/XX and XA2006/XX
