NEW AM0572/00 HYDROPLUS WOOD PROTECTION

Designed for the preventive treatment of wood for window and door frames and outdoor items. General use product conceived to offer the widest possible use: industrial, professional, and for DIY if necessary.

The colorless product is ready to use, contains specific and selected active ingredients capable of preventing the attack of the wood by harmful organisms present in it such as the blueing fungus or the xylophagous basidiomycete fungi.

PT08 wood preservative for preventive treatment in Use class 2 and 3 , according to the European regulation BPR n. 528/2012. Registration active in all EU countries, Switzerland, Iceland and Norway.

Preservative to be applied directly to raw wood as a preventive treatment to increase its natural resistance and reach the necessary resistance class to fungi. Most soft woods such as pine, fir and similar have a natural resistance class of class 4 or 5 according to the EN350-2 standard. For stable and semi-stable elements exposed to the elements, the use of wood in resistance class 1 or 2 is suggested; it is therefore advisable to use a wood protection product to improve its natural durability.

Can be used as a first coat to protect the wood of any coating system for exteriors.

TECHNICAL FEATURES	
AREA OF USE	Window and door frames.
APPLICATION	Flow coating, dipping, brush, airless, HVLP, cup spray.
